The attachments can be selected from the list.

On one side, the Hader VX Vertical Bar has been included.

Flat side placed toward the crown, parallel to the insertion path.

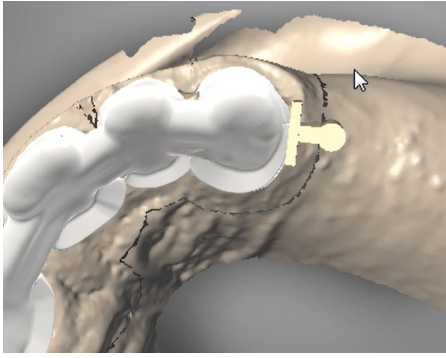

The inclined side follows the ridge crest.

The position is adjusted to ensure it is centered on the ridge.

The position is confirmed.

It will change colour to indicate completion.

On the opposite side, a Hader SX 2.2 has been used.

Placed as gingivally as possible, leaving space for cleaning.

It must coincide with the centre of the ridge.

The position is confirmed.

The design is ready for manufacturing

THE ATTACHMENTS YOU TRUST, NOW IN DIGITAL

The Hader Digital Library offers a treasure of digital files for our renowned Hader attachments, including the CX, VX, and SX systems. Craft prostheses that fit perfectly and provide superior patient comfort, all at your fingertips.
